RE: Recommendation of Megan Gibbs

To Whom It May Concern:

I taught Megan in two courses, CIS 255 Client-side Web Application Development and CS 233 Cybercrime, and I can attest to her academic performance, enthusiasm for learning, and exceptional class participation.

In CIS 255, Megan demonstrated solid understanding of client-side web application development principles and techniques, specifically HTML, CSS and JavaScript. Her ability to work collaboratively, using Git and GitHub, at the basic level presented in the course. She effectively communicated and shared her knowledge in class.

In CS 233, Megan demonstrated fundamental understanding of technical and nontechnical issues in the field of cybercrime. In the course students explored laws, court cases, and computational techniques that involved the use of Kali Linux and Bash shell scripting. She displayed a keen interest in the subject matter and demonstrated a fundamental understanding of the legal, ethical, and technical aspects of cybercrime.

Megan possesses a passion for technology and a team-oriented personal style. Her aptitude and ability to work collaboratively would make her an asset to any enterprise requiring technical investigation and teamwork.

Sincerely,

George Corser
